

Change Healthcare Stratus Imaging Share

Store, share, and access images via the cloud

Even in our digital age, many hospitals and radiology clinics still share medical images by burning them onto CDs or DVDs, which are then entrusted to the patient or courier for delivery to a specialist. This time-consuming process frustrates both patients and physicians, who may not even have access to a computer with a disc drive to view the images.

Patients who arrive with inaccessible or missing images are typically sent for duplicate scans – an unnecessary cost which delays care and decreases patient satisfaction. Change Healthcare Stratus Imaging Share leverages the cloud to help provide secure, instant access to imaging exams, enabling more collaborative care.

Optum

Improve clinical outcomes with fast, secure medical image exchange

Satisfy both patients and clinicians with automated image routing to help reduce waste, increase efficiencies, and improve care collaboration

Streamline Workflow

Change Healthcare Stratus Imaging Share lets providers and facilities share medical images via a HIPAA-aligned, web-based platform. Clinicians can quickly upload medical images from a variety of internal and external sources, including PACS and web portals, CDs, DVDs, USB sticks, and folders.

Clinicians can export and import images directly from the PACS, saving valuable time. The platform's highly configurable, flexible cloud infrastructure enables a mix of automated, semi- automated, and direct-managed workflows to revolutionize your imaging workflow. Change Healthcare Stratus Imaging Share interfaces directly with your EMR, PACS, or DICOM modalities.

Improve Care Collaboration

With Change Healthcare Stratus Imaging Share, caregivers can view and exchange exams and reports in advance, before the patient arrives. Physicians from disparate practices can easily collaborate on care plans.

Multiple sharing options allow clinicians to share exams with one another via a secure email link, without requiring a specific account or login. From any web-enabled device, clinicians can consult a peer or request a second opinion on current or prior radiology exams. Caregivers can also share images with patients upon request, improving engagement and satisfaction.

To review images, clinicians can use a web browser and the platform's built-in, high-speed clinical viewer, which enables consultations without the hassles of CDs or the latency associated with viewers built on server-side rendering technologies.

Reduce Redundant Testing

The platform lets your staff anticipate treatment plans well before the patient's appointment. Staff no longer need to wait for the patient's previous images to be pulled, burned, and sent. All images are identified with each organization's medical record number prefix to prevent duplicate records.

With greater transparency into the patient's imaging history, staff are far less likely to order redundant exams—preventing unnecessary delays, costs, and radiation exposure.

Change Healthcare Stratus Imaging Share delivers diagnostic workstation performance over the internet, without compromising image quality and usability. The platform helps:

- Support improved care quality and patient safety
- Reduce the cost of redundant testing
- Support telehealth appointments
- Eliminate the risk of physical media being lost in transit
