

Change Healthcare Cardiology™ Charge Manager

Streamline charge capture

At many hospitals, the charge capture process requires the completion of a paper charge form and the subsequent entry of charges into the hospital information system (HIS), followed by a charge audit. This resource-intensive, error-prone process can take up to 15 minutes per procedure, distracting your clinical staff from patient care.

The Change Healthcare Cardiology™ Charge Manager module expedites reimbursement and minimizes errors by automating this process. The module leverages direct entry of procedural data at the point of care, eliminating duplicate data entry and ensuring that all charges match documentation.

Automate the charging process

Change Healthcare Cardiology's single database design provides your entire care team with instantaneous access to the complete cardiovascular electronic medical record (EMR), including images, reports, and waveforms with integrated charge and inventory management.

The Change Healthcare Cardiology™ Charge Manager module automatically captures charges for devices and procedures documented by your clinical staff at the point of care. This seamless functionality allows your clinical staff to remain focused on patient care and clinical documentation.

The module provides a single, integrated charge system for all cardiology charge capture, supporting both the hospital's technical charges as well as physicians' professional billing for all catheterization, electrophysiology, echocardiography, vascular ultrasound, nuclear medicine, and ECG procedures.

Optum

Improve accuracy

As part of the charge capture workflow, the system instantaneously generates a charge audit worklist. By enabling an immediate split-screen review of procedure documentation and charges, the module helps your organization reduce billing errors and missed charges.

Charge Manager provides:

- Secure web support that ensures easy access from anywhere in the facility
- Designated screens for technicians, nurses, and charge capture administrators
- Built-in and ad hoc report generation, including financial audit, inventory, and reconciliation reports
- Real-time HL7 DFT and batch capabilities
- Support for CPT® coding, including modifiers; ICD-9 and ICD-10 coding
- Facility-based charge set configuration

Reduce administrative costs

By integrating charge capture with your cardiovascular information system, Change Healthcare Cardiology Charge Manager can help your organization reduce administrative cost and improve revenue. The solution helps:

- Streamline the charge process
- Significantly reduce the hours required by manual charging
- Reduce billing errors and missed charges
- Improve staff satisfaction
- Expedite reimbursement
- Improve documentation accuracy

Charge information can be queried and analyzed along with clinical and inventory information, allowing facilities to generate multiple reports, including financial audit, inventory, and reconciliation reports.

Speed reimbursement with automatic charge capture

Immediately capture charges for all supplies and procedures documented at the point of care, minimizing errors.
