

Change Healthcare Imaging Fellow™ solution

Unlock Your EMR Data

Many hospitals invest millions in their EHR, only to struggle with ineffective system utilization.

In fact, **58%**[1] of physicians say their EHR is hard to use, and **90%**[2] say improving data access would improve patient care.

Context is crucial. Having relevant patient data available at the point of care is essential in a value-based care environment. Clinicians need an easier way to access relevant data so they can streamline the workflow.

Change Healthcare Imaging Fellow provides radiologists with relevant prior reports, filtered clinical notes, related medications, labs, and more. Rich clinical data is served to radiologists within their imaging cockpit, so they don't have to go looking for it.

Improved access to relevant information

To deliver the best care possible, radiologists need EHR data presented alongside imaging data. Change Healthcare Imaging Fellow optimizes the data in your EHR and PACS to help you quickly locate pertinent patient data.

Change Healthcare Imaging Fellow is a radiologist's real-time digital fellow. When a study is launched, relevant contextual data – including relevant prior reports, filtered clinical notes, lab values, medications, and surgical notes – are displayed. This additional information offers radiologists a wealth of knowledge that helps them improve and streamline their workflow.

Easy-to-view widgets present data in an imaging-centric view within the reading cockpit. Flexible templates accommodate various clinical scenarios, and let users adjust both the amount and type of information they display.

Boost accurate reimbursement

Change Healthcare Imaging Fellow helps radiologists fully participate in the care team process of reducing costs in key areas, such as speeding time to discharge, and improving reporting workflows.

Providing accurate reports up-front can save time and money. Missing information often leads to billing denials, additional information requests, and referring clinicians' dissatisfaction. Change Healthcare Imaging Fellow lets radiologists access the data they need to deliver quality reports the first time.

Improving time-to-discharge and avoiding unnecessary procedures can also help reduce costs. Clinical context at the point of care helps radiologists improve follow-up recommendations and avoid expensive, unnecessary tests.

Integrate industry standards

In addition to maintaining our commitment to meeting the latest security standards, we integrate with market-leading EHR vendors such as Epic (available in the Epic App Orchard) and Cerner. Change Healthcare Imaging Fellow incorporates key industry standards such as Fast Healthcare Interoperability Resources (FHIR) alongside EHR vendors' proprietary APIs to provide access to clinical data.

View relevant patient data and avoid unnecessary testing

"When you gain relevant information, you avoid unnecessary testing. That's the bottom line."

M. Elon Gale, MD, FACR CIO
Commonwealth Radiology Associates
