Change Healthcare Cardiology™

Realize financial gains with scalable cardiology solutions

Help maximizeyour EMR and VNA investment

Reduce IT overhead

Change Healthcare Cardiology™ solutions help you minimize costs by reducing the number of IT interfaces and resources you maintain. Our single-database enterprise cardiovascular information system (CVIS) leverages your existing EMR and VNA investments, providing a single point of connectivity to cardiovascular imaging, analysis, and reporting.

Invasive and non-invasive solutions are delivered through a single platform, helping you reduce complexity. The portfolio:

- Integrates seamlessly with multiple EMRs and VNAs
- Provides a unified cardiovascular record, automatically populated with hemodynamics data, without the need for interfaces
- Supports multiple facilities
- Standardizes structured reporting and imaging workflows across the enterprise
- Speeds onboarding of new physicians and sites

Increase revenue capture

Our end-to-end cardiology platform supports charge capture, inventory management, and enterprise analytics—saving you time and money. An inventory management tool reduces costs in the Cath Lab by eliminating expiring products. Robust analytics quantify performance and provide departmental business intelligence.

Streamline revenue generation by entering procedural data directly into our charge capture system, instead of requiring duplicate entries in multiple systems. The Charge Manager solution instantaneously generates a charge audit worklist to help ensure that all charges match documentation.

Improve patient and family satisfaction

Track cardiology activity across facilities with the Procedure Tracking Viewer, which provides detailed pre-procedure, intra-procedure, and post-procedure status updates. Staff can quickly see the patient's location, overall progress, and assigned staff members, facilitating smooth transitions and efficient resource management.

A public mode displays encrypted patient names with simplified periprocedural status and start times for family members, increasing patient satisfaction. Greater wait-time transparency can contribute to higher HCAHPS survey scores, leading to increased reimbursement.

Achieve better outcomes

Our interoperable Change Healthcare Cardiology™ solutions share a single database, enabling enterprise-wide data aggregation. Our modular design provides a scalable, future-proof system that can expand with your business, helping you:

- Decrease operating costs with superior uptime and server virtualization
- Achieve IT resource and infrastructure cost savings
- Improve clinical and financial performance via analytics and reporting
- Improve charge capture accuracy
- Mitigate ransomware risk with superior cybersecurity
- Increase reimbursement via improved HCAHPS scores
- Capitalize on future technology investments
